

# INVITATION

## SCIENCE ENGAGEMENT TRAINING ONLINE

### Science Engagement at large public events

We invite researchers of various different research areas to participate in a training about Science Engagemnet at large public events. The training will be held online and will take place in a compact, four-hour format.

You, as researches, will receive practical input on how to prepare for the specific setting of large public events (such as science fairs or the European Researchers' night). Interactive elements and discussions will further help you practice your Science Engagement competences.

Sarah Funk and Doro Born, as trainers of Science Engagement competences with years of experience in this field, will equip you with specific tools to engage with different audiences in adequate ways.

The training centres around the following key questions:

- How can I engage with different audiences at large public events?
- Which communicative goals do I have? How can I generate impact?
- How can we use language, facilitation techniques and storytelling in order to create access to complex scientific concepts?
- How can I further improve my activities in order to make them as interactive and dialogue-oriented as possible?

The following methods will be used:

- Input,
- interactive hands-on activities,
- discussions and (mini-)presentations
- individual and group work
- feedback and reflection.

#### Further details

Registration is possible via this [LINK](#). Further information on the project is available [HERE](#).

We are looking forward to spending an insightful afternoon with you!
